## WHAT WILL I LEARN?

As a geography major, you will study the human and physical landscapes of the Earth's surface. You will develop an understanding of various aspects of the Earth, including its physical features, the role of humans in modifying the Earth, and the relationships between peoples and places. Geography considers many factors such as human culture, language, climate and weather, vegetation, landforms, trade flows, transportation, and cities. These are studied using geography's unique spatial perspective.
